Vacuum Metalizing

# Where the Market Leaders Go for Functional and Decorative Coatings

As competition rises and project margins fall, choosing the right metalizing and coating partner is more important than ever. For over 60 years, subcontractors have turned to Mueller Corporation for our expertise in EMI/RFI shielding, decorative finishes, highly reflective coatings, heat shielding, and more.

Your reputation is on the line with every order - choose a partner you can trust.

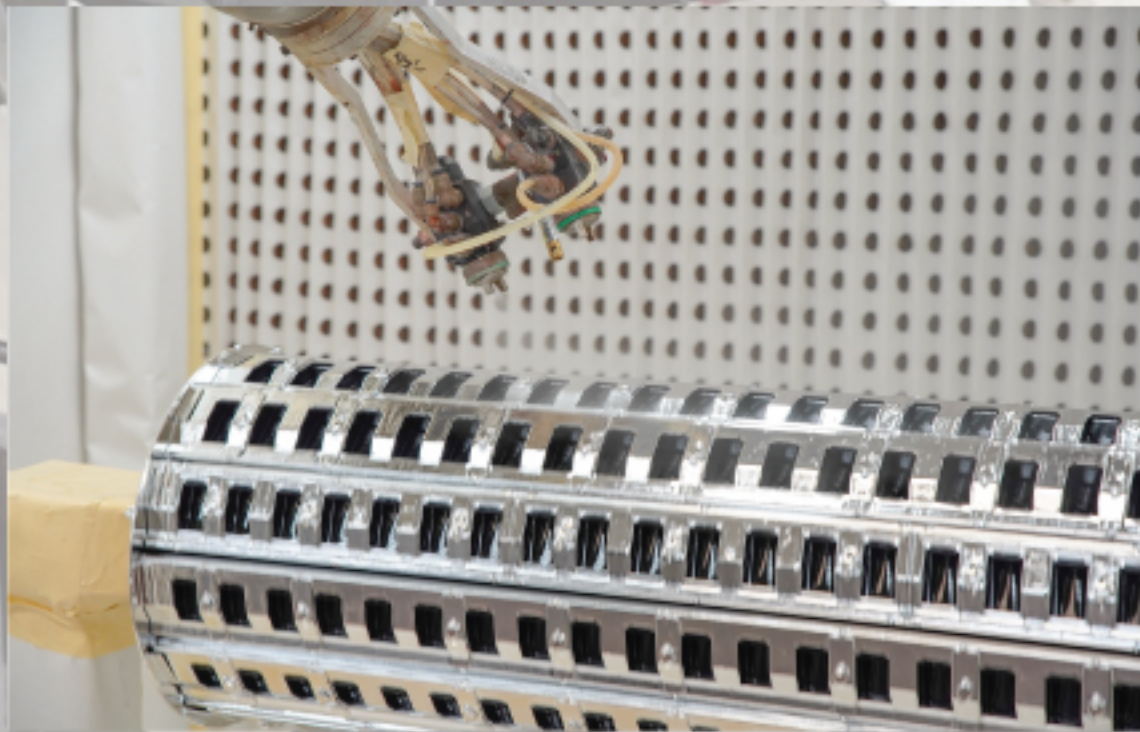

## Engineering Expertise, from Prototype to Final Product

After 60+ years in the industry, there are very few application challenges we haven't seen. Our in-house engineering experts help you navigate the complexities of various coating processes. We'll help select the right process to meet your budget, product quality, production scale, and material property requirements, even if you're starting with little more than a concept.

## Efficient Processes For Better Results

Mueller's vacuum metalizing process is more cost effective and produces better results than most traditional metal coating methods. Our proprietary process enables us to achieve thicker, more precise coating than competitors. The ability to apply a single 4 micron thick coating of aluminum or multi-layer coatings such as copper/aluminum means we can meet a variety of coating needs. Our eleven automated vacuum chambers with four different sized chambers accommodate a variety of applications and part sizes.

## Full-Capacity Facility for Fast Turnaround Times

Mueller's 50,000 square foot facility is one of the largest in the industry, with machines that can accurately produce the components you need in both prototype and high-volume production quantities. Our capacity means we are able to meet the needs of nearly every project in-house, saving you time and money. Don't let your coating partner cause a delay in your client's project!

## A Partnership Philosophy for Quality Results

Our Partnership Philosophy means we act as an extension of our customer's endeavors. It is our mission to provide the highest quality coatings at competitive prices without sacrificing our customer service or dependability. We are constantly evolving the quality and efficiency of our processes to stay ahead of our customer's needs and ensure we exceed the industry's highest standards.

Vacuum Metalizing

# OUR SERVICES

Mueller helps solve your clients' most advanced technical challenges. We provide coating solutions for several major industries, including Medical, Aerospace, Defense, Automotive, Consumer Goods and more.

**Vacuum metalizing and spray coating on plastic, glass, and metal**

**Vacuum metalized reflective coatings, achieving up to 98% reflectivity**

**EMI shielding, RFI shielding, and ESD shielding**

**Heat shielding, vapor barriers, conductive paths**

**Ceramic coatings, Teflon (PTFE) coatings, and hard coatings**

**Decorative metalized finishes in shades of chrome, silver, gold, color chromes, gunmetal, and more**

**Decorative painted finishes in metallic silver and gold, soft touch, high gloss, matte, and textured finishes**

**Call Today  
for a Free  
Sample!**
